Tutorial 5 - Pandas DataFrame, Series, Data Manipulation, Matplotlib Plotting

Section A: Multiple Choice Questions (MCQ)

1. What is Pandas mainly used for?

A. Game development
B. Data analysis
C. Web design
D. Networking

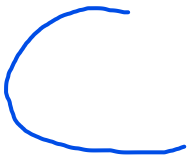

Answer:

2. Which structure is used in Pandas to store tabular data?

A. List
B. Tuple
C. DataFrame
D. Set

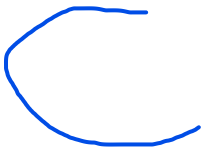

Answer:

3. How do you import Pandas?

A. import pandas
B. import pd
C. import pandas as pd
D. pandas import

Answer:

4. What is a Series in Pandas?

A. A 2D table
B. A 1D labeled array
C. A loop
D. A function

Answer:

5. How do you select a column 'age' from DataFrame df?

A. df(age)
B. df['age']
C. df.age()
D. df->age

Answer:

6. Which function shows first 5 rows?

A. df.tail()
B. df.head()
C. df.show()
D. df.first()

Answer:

7. Which library is used for plotting graphs?

A. NumPy
B. Pandas
C. Matplotlib
D. Scikit

Answer:

8. What does plt.plot() create?

A. Pie chart
B. Bar chart
C. Line graph
D. Histogram

Answer:

9. Which function displays the plot?

A. show()
B. display()
C. plot()
D. render()

Answer:

10. What does df.shape return?

A. Column names
B. Number of rows only
C. (rows, columns)
D. Data values

Answer:

Section B: Fill in the Blank

1. import pandas as _____

Answer: pd

2. df = pd._____('data.csv')

Answer: read

3. df.head() shows first _____ rows

Answer: 5

4. plt._____() is used to display a plot

Answer: show

5. df.shape returns _____

Answer: tuple of (row(s), column(s)) of a given dataset.
